Top 10 IVF Centres in Mumbai

In India, as many as 20% of couples seek treatment for IVF (In-vitro Fertilization). Medical reasons or health problems for the failure to conceive or to get pregnant could be present in either of the partners. In our country, problems of infertility or being infertile is observed in 35-40% of men, and in an equal percentage of women, while, both partners face the problem in the 20-30% of cases.

IVF (In-Vitro Fertilization) is a technique for treating infertility the inability to conceive or to get pregnant after two to three years of trying to have a baby. It is true that both men and women have an equal lifestyle or suffering from infertility.

Due to increased work stress, hectic and fast and furious urban lifestyle, environmental toxins, and delaying marriageable age - the chances of infertility in the couples are rising significantly.
